The original numbers of the vehicle or spare part manufacturers serve only for reference purposes
Araç ve yedek parça imalatçıların orijinal parça numaraları referans amaçlı verilmektedir

Important Information / Önemli Bilgiler

The original reference number of the vehicles or spare parts manufacturers serves only for reference purposes. We can not assume any responsibility for possible errors.

Joint Cross is produced by alloy steel hot forging. Bearing caps is produced by cold forging - extruded. Materials are carburized and case hardened to a uniform depth for strength. Journal trunnions, cup face and outer diameter are precision ground.

We warrant the customers new parts to be free of defects due to faulty materials or bad workmanship. Except damages caused by negligence or faulty applications, new parts will be replaced with the defected ones approved by our Quality Department.

The universal joints contain enough grease for storage. Existing grease in the universal joints maintains the item in their position and avoids oxidation.

Prior the installations, pay attention that the lubricating nipples must be cleaned before lubricating. It must be ensured that grease has to be pressed in until it leaks from all four seals of the bearing cups. This is the only way to ensure that all four bearings have received fresh grease. The lubricant may not be pressed in with excessive pressure.

Before pressing in the bearing cups, make sure that all needles are in contact with the inside diameter of the cup.

Do not replace damaged bearings individually. In case of any need, it is advisable to replace the complete universal joint.

Cardan Shafts are used in variety of applications with very different operating conditions. It is recommended that inspections and maintenance should be carried out at regular intervals.

Taşıt veya yedek parça imalatçıların orjinal referans numaraları sadece bilgi amaçlı verilmektedir. Muhtemel hataların firmamıza bağlayıcılığı yoktur.

Mafsal istavrozü gövdesi alaşımlı çeliklerin sıcak dövülmesiyle, yüksükler de soğuk dövme ile imal edilmektedirler. Gövde ve yüksükler sağlamlık ve dayanıklılık için muntazam bir derinliğe kadar sertleştirilirler. Muylular, yüksük içi ve dış yüzeyleri yüksek yüzey kalitelerinde taşlanmaktadır.

Firma olarak müşterilerimize hatalı malzeme veya kötü işçilik sebebiyle oluşacak hasarlı ürünleri bedelsiz olarak yenileriyle değişimini garanti etmekteyiz. Müşteriden kaynaklanabilecek ihmalkarlık veya yanlış uygulamalar dışındaki durumlarda, hasarlı ürünler kalite departmanımızın onayıyla yenisiyle değiştirilmektedir.

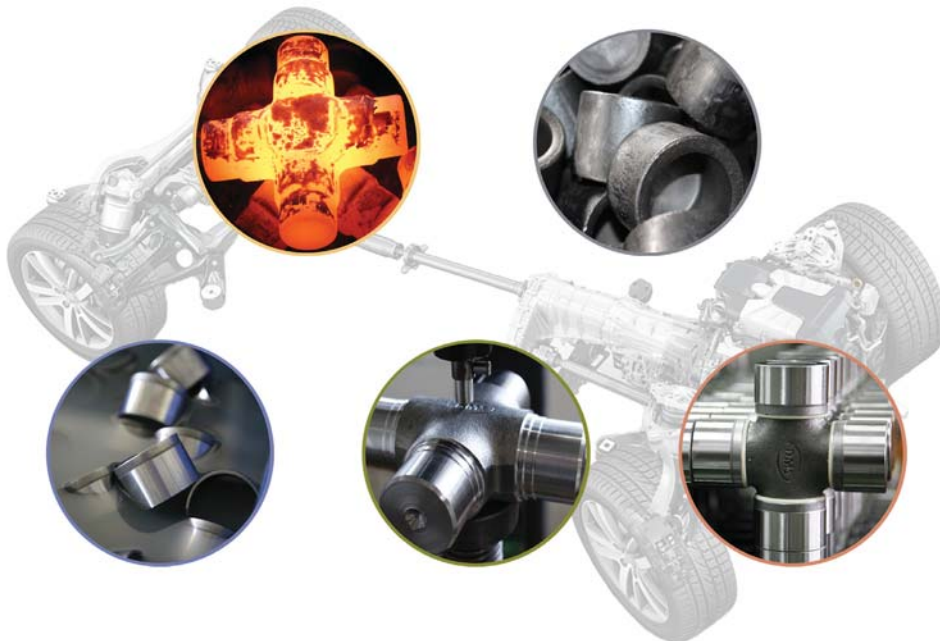

Mafsal İstavrozları nihai montajdan önce oksitlenmeden kaçınmak ve mevcut konumunu korumak için yeterli miktarda yağlanmaktadır.

Montaj öncesi, yağlama işlemine başlamadan önce gresörlüklerin temizlenmesine dikkat edilmelidir. Yağlama işlemi iğne bilyalı rulmanların keçelerinden çıkıncaya kadar uygulanmalıdır. Böylece her bir rulmanın yeterli miktarda yağlanması temin edilecektir. Yağlama işlemi müade edilebilir basınçtan yüksek değerlerde gerçekleştirilmemelidir.

Montaj öncesi, rulman içindeki iğne bilyaların rulman iç yüzeyiyle temas halinde olması gerekmektedir.

Hasarlı iğne bilyalı rulmanların ayrı ayrı değişimi yapılmamalıdır. İhtiyaç durumunda mafsal istavrozunun komple değişimi önerilir.

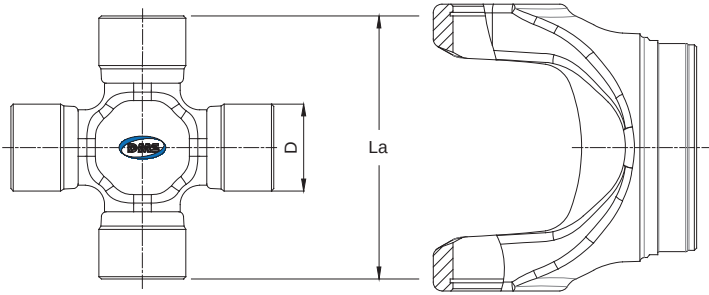

Kardan milleri değişken operasyon şartlarında birçok uygulamalarda kullanılmaktadır. Kontrol ve bakımların belirli zaman aralıklarında gerçekleştirilmesi önerilir.

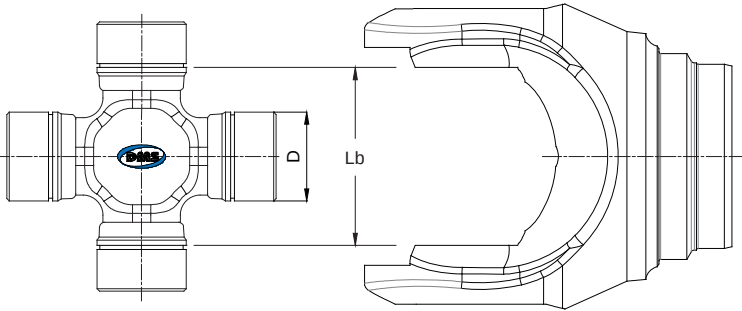

Universal Joint Kit Identification / Mafsal İstavrozu Tanımlaması

External Locking / Dıştan Segmanlı

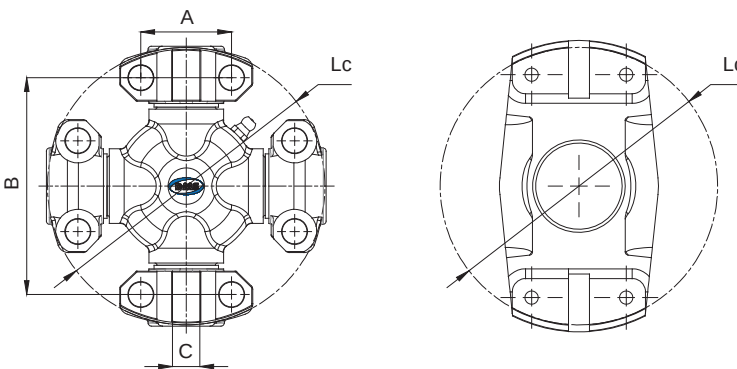

- 1.) Measure outside diameter of bearing cup (**D**)
İğne bilyalı rulmanın dış çapını (**D**) ölçünüz
- 2.) Remove Rubber Seals or clamp bearing cups
İğne bilyalı rulmanlardan keçeyi çıkartınız veya mence neyle sıkıştırınız.
- 3.) Take measurement over end of bearings (**La**) after re-assembling bearing on trunnions
Keçeleri çıkarılan rulmanların mafsal istavrozu muylularına montajı yapıldıktan sonra aynı eksendeki rulmanların tabanlarından karşılıklı olarak ölçünüz (**La**)

Internal Locking / İçten Segmanlı

- 1.) Measure outside diameter of bearing cup (**D**)
İğne bilyalı rulmanın dış çapını (**D**) ölçünüz
- 2.) Remove Rubber Seals or clamp bearing cups
İğne bilyalı rulmanlardan keçeyi çıkartınız veya mence neyle sıkıştırınız.
- 3.) Take measurement from inside of snap ring groove to the one of opposite bearing (**Lb**)
Keçeleri çıkarılan rulmanların mafsal istavrozu muylularına montajı yapıldıktan sonra aynı eksendeki rulmanların segman kanallarının iç yüzeylerinden karşılıklı olarak ölçünüz (**Lb**)

Mechanics Design / Mekanik Tip

- 1.) Measure from inside of bolt hole to outside of opposite bolt hole of wing bearing (**A**)
İğne bilyalı rulmanların delik merkezlerinden ölçü alınız (**A**)
- 2.) Remove Rubber Seals or clamp bearing cups
İğne bilyalı rulmanlardan keçeyi çıkartınız veya mence neyle sıkıştırınız
- 3.) Take measurement (**B**) from centre of bolt hole to the one of opposite bearing in the same axis
Aynı eksen de karşılıklı rulmanların delik merkezlerinden ölçü alınız (**B**)
